LEVERAGING INCLUSIVE ICTs into the TERRITORIES of TOMORROW

The [Digital World Forum on Accessible and Inclusive ICTs](http://DigitalWorldForum.org) core objective is to build roadmaps with stakeholders to leverage access to ICT in Developing Countries. Another goal is to strengthen EU competitiveness and to pave the way for strategic partnerships in view of gaining access to knowledge, developing standards and interoperable solutions.

ENSTA PC4D (<http://pc4d.org>) is looking for collaboration and partnerships with manufacturers to help define the mobile/laptop convergence roadmap and to build strategic partnership towards this goal.

Originally founded in 1741, ENSTA (<http://ensta.fr>) is one of the top 10 institutes of higher education for engineering in France, and is part of SYSTEM@TIC PARIS-REGION French competitiveness Cluster. ENSTA is a partner (<http://pc4d.org>) in the [Digital World Forum on Accessible and Inclusive ICT](http://DigitalWorldForum.org) (<http://digitalworldforum.eu>), a [FP7 project](#) in the field of ICTs that started on January 2008.
